

CYBERBULLYING

- Computers with wi-fi are one of the most important tools. They are good for work, learning and entertainment. They can be used for different purposes.

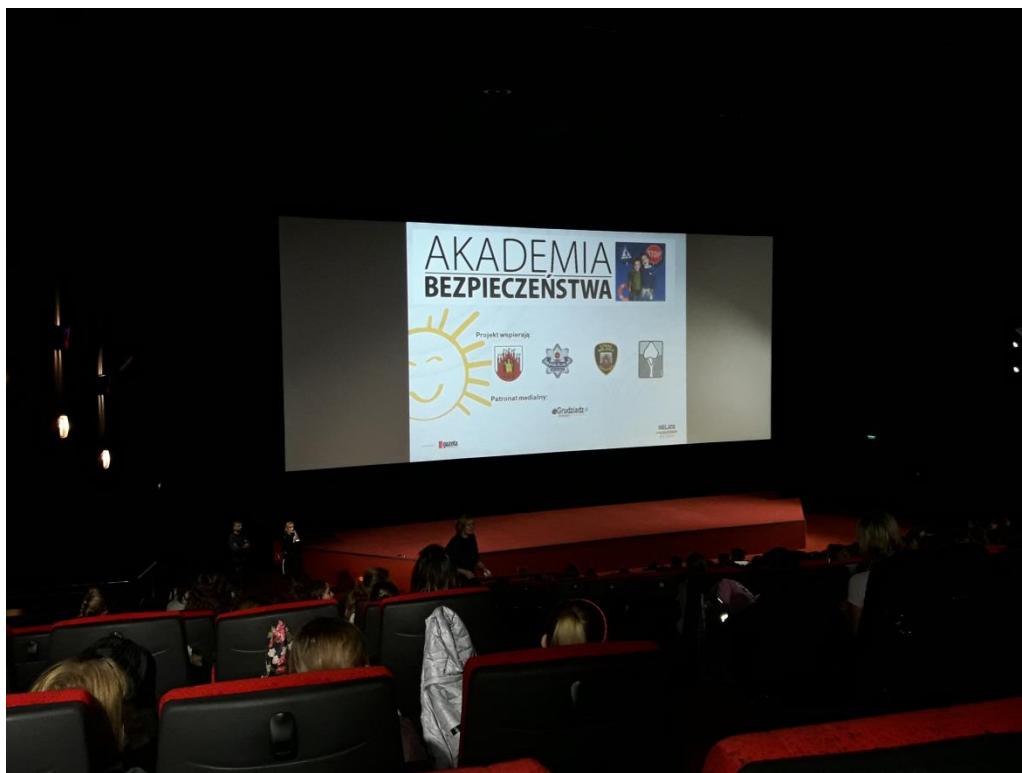

Last year a student of our school became a victim of cyberbullying. His schoolmates created insulting memes with his photo and sent to all friends.

After these events, the students had a talk with policemen about legal consequences of such behaviour.

Our students take part in different preventive presentations about cyberbullying. We invite actors from the theatres who prepare performances about various dangers.

To prevent cyberbullying they are carried out educational programmes.
