TRAVEL TO MÁLAGA

I really enjoyed being able to travel with three girls that I already knew and to make friends with them.

The plane had two seats and I went to the window, I loved to see the take off of Portugal, because from the top you can see a large part of Lisbon illuminated.

Shortly before arriving in Spain I was a bit nervous because I did not know what the family was like and if I had to speak in English or Spanish. It was then that I met Laura and her family, who were very nice to me. The first day was to meet the family and their home country and the rest went to school activities.

I loved Laura's class and enjoyed participating in their class activities. At school I knew the gym and the pool, in addition to the classrooms and the open spaces, but this day was where I had more fun. The pool activities were good and the contact with children from other countries without being Spanish was also fun.

Outside of the school we met the Picasso museum, which we had never seen before and visited several beautiful places. One of the reasons I enjoyed the experience, was also the sea, the beaches were magnificent.

Laura is a very nice girl, but shy and may have been why we gave more time to create a good atmosphere between both. Later I got used to it and had a lot of fun with it. I also loved their pets that were very cute.

I think the place I liked the most was the caves, because it was a different experience and also because I knew a little more of the history of that place.

At the end of the experience, what cost me the most was the farewell, but I made new friends, met new people and a new land with different cultures.

Several incidents occurred in Portugal, but everything was resolved. The Spanish culture is quite different and we brought back memories that the school offered us and that I brought from the places I visited.

On the return plane I was already a little bit homesick for my family and my dog.

However I found this trip useful and incredible.
